

Task 3 Part 2

We need to store the version details along with the changes made in the document

In the Intranet website we could instead of directly showing the pdf when clicked on the link would direct to another page that shows different documents along with their release dates, with the latest on top

To show the changes

We would compare the latest document with any other opened previous version document and would compare them both, removed content would be red highlighted in the previous document and new content would be green highlighted in the new document. We could implement AI while checking for changes.
